1 Arbetsbeskrivning

1.1 Rasmus Andersson

Arbetade med kommunikation mellan servern och klienten med Kalle Bornemark, och Jimmy Maksymiw. Formgav projektrapporten samt skrev ImageScaleHandler.java samt Chatlog.java. Jobbade inte med UI-klasserna.

1.2 Emil Sandgren

Arbetade med UI klasserna ClientUI, StartClient och StartServer och ChatWindow. Huvudansvarig för UI. Jobbat med att försöka koppla ihop UIt med vad som kommer in från servern.

1.3 Erik Sandgren

Arbetade med generell grundläggande kommunikation mellan server och klient i början. Jobbade sedan med UI och hoppat in lite därefter på det som behövdes. Har ritat upp mycket av strukturen och fixat buggar.

1.4 Jimmy Maksymiw

Arbetade med planering och struktur av hur chatten ska fungera. Med programmeringen har jag arbetat mest med logiken som används i både klienten och servern. Hur kommunikationen sker och vad som ska göras på de olika sidorna. Har också varit med och gjort de olika diagrammen.

1.5 Lorenz Puskas

Arbetade enbart med att designa ClientUI tillsammans med Emil.

1.6 Kalle Bornemark

Arbetade med server/klient-kommunikation, projektplanering och klasstrukturen. Skapade även diagrammen och fungerat som projektledare till och från.

2 Instruktioner för programstart

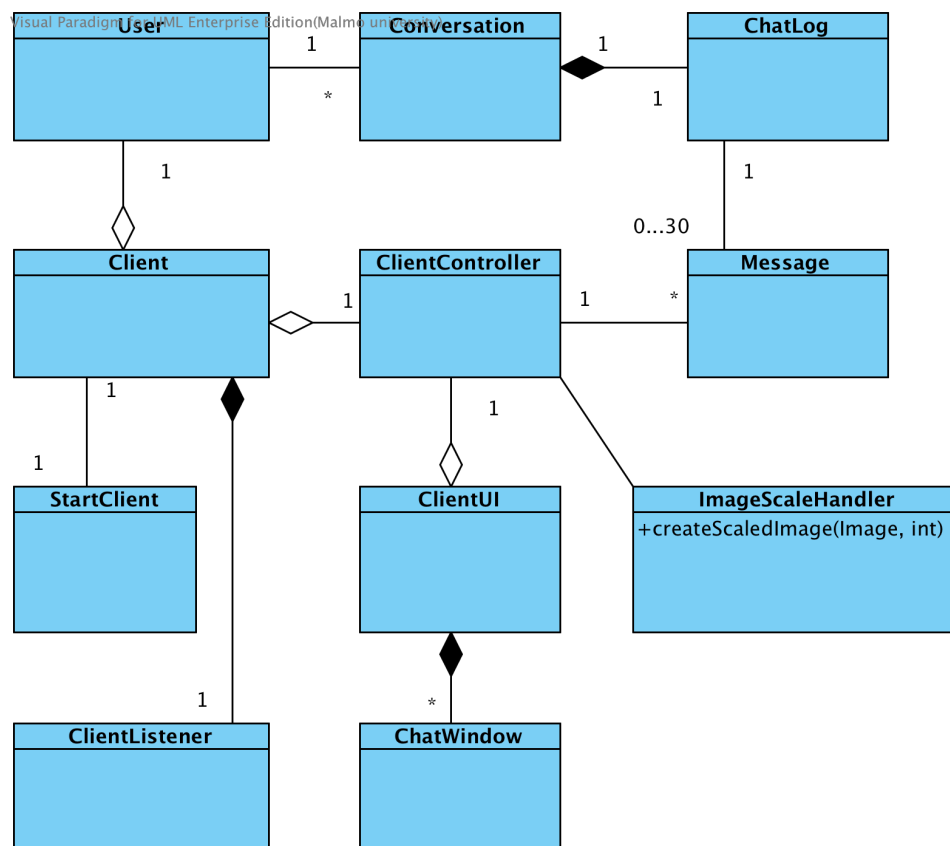

För att köra programmet så krävs det att man startar en server och minst en klient. Main-metoden för att starta servern finns i StartServer.java och main-metoden för att starta klienter finns i StartClient.java. Alla filvägar är relativa till det workspace som används och behöver inte ändras.

3 Systembeskrivning

Vårt system förser en Chatt-tjänst. I systemet finns det klienter och en server. Klienterna har ett grafiskt användargränssnitt som han eller hon kan använda för att skicka meddelanden till alla andra anslutna klienter, enskilda klienter, eller till en grupp av klienter. Meddelanden består av text eller av bilder. Alla dessa meddelanden går via en server som ser till att meddelanden kommer fram till rätt gruppchat eller till lobbyn. Servern lagrar alla textmeddelande som användarna skickar och loggar även namnet på de bilder som skickas via bildmeddelanden. Det loggas även när användare ansluter eller stänger ner anslutningen mot servern.
