1 Arbetsbeskrivning

1.1 Rasmus Andersson

Arbetade med kommunikation mellan servern och klienten med Kalle Bornemark, och Jimmy Maksymiow. Formgav projektrapporten samt skrev ImageScaleHandler.java samt Chatlog.java. Jobbade inte med UI-klasserna.

1.2 Emil Sandgren

1.3 Erik Sandgren

Arbetat med generell grundläggande kommunikation mellan server och klient i början. Jobbat sedan med UI och hoppat in lite därefter på det som behövdes. Har ritat upp strukturen mycket och buggfixat.

1.4 Jimmy Maksymiow

1.5 Lorenz Puskas

1.6 Kalle Bornemark

2 Instruktioner för programstart

För att köra programmet så krävs det att man startar en server och minst en klient. Main-metoden för att starta servern finns i StartServer.java och main-metoden för att starta Klienter finns i StartClient.java. Alla filvägar är relativa till det workspace som används och behöver inte ändras.

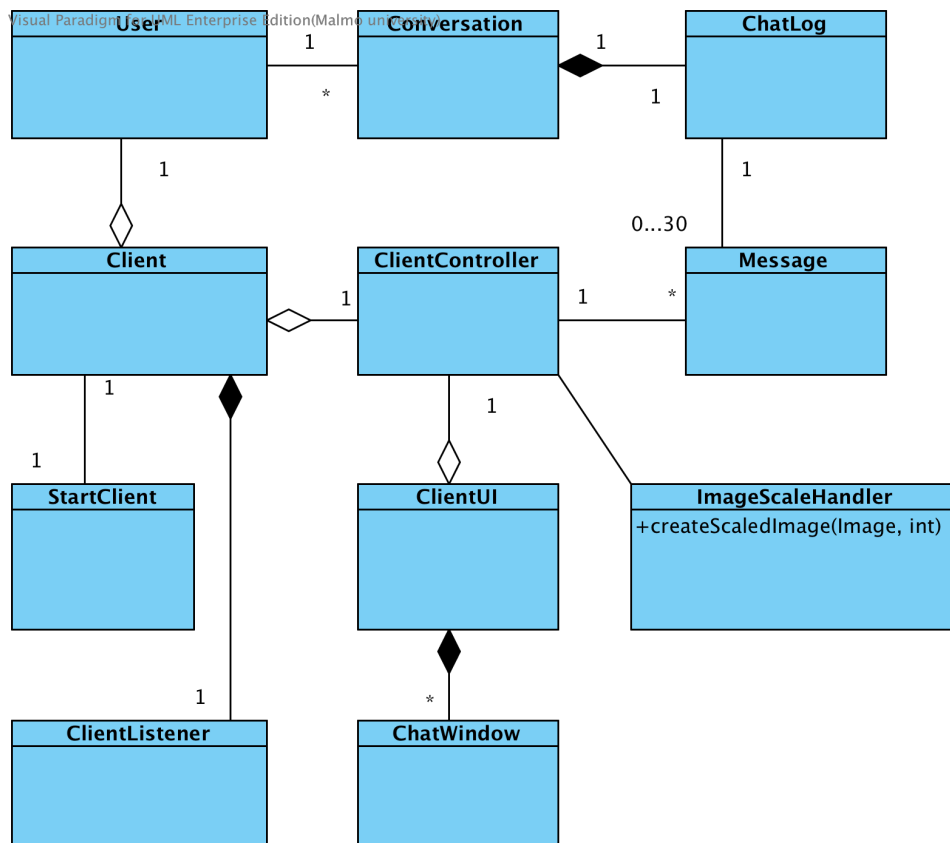

3 Systembeskrivning

Vårt system förser en Chatt-tjänst. I systemet finns det klienter och en server. Klienterna har ett grafiskt användargränssnitt för som han eller hon kan använda för att skicka meddelanden till alla andra anslutna klienter, enskilda klienter, eller till en grupp av klienter. Meddelanden består av text eller av bilder. Alla dessa meddelanden går via en server som ser till att meddelanden kommer fram till rätt personer och med rätt kontext, exempelvis som ett lobbymeddelande eller som ett meddelande i en viss gruppchatt.

Servern lagrar alla textmeddelande som användarna skickar och loggar även namnet på de bilder som skickas. Det loggas även när användare ansluter eller stänger ner anslutningen mot servern.
