1 Arbetsbeskrivning

1.1 Rasmus Andersson

Arbetade med kommunikation mellan servern och klienten med Kalle Bornemark, och Jimmy Maksymiw. Formgav projektrapporten samt skrev ImageScaleHandler.java samt Chatlog.java. Jobbade inte med UI-klasserna.

1.2 Emil Sandgren

Arbetade med UI klasserna ClientUI, StartClient och StartServer och ChatWindow. Huvudansvarig för UI. Jobbat med att koppla ihop UI:t med vad som kommer in från servern.

1.3 Erik Sandgren

Arbetade först med generell grundläggande kommunikation mellan server och klient. Jobbade sedan med UI och har även hoppat in där det behövdes på andra delar av systemet. Har ritat upp mycket av strukturen och fixat buggar.

1.4 Jimmy Maksymiw

Arbetade med planering av och struktur på hur chatten ska fungera. Vid programmeringen har han arbetat med logiken som används i både klient och server. Hur kommunikationen skall ske och vad som ska göras på de olika sidorna. Har också varit med och gjort diagrammen.

1.5 Lorenz Puskas

Arbetade främst med att designa ClientUI tillsammans med Emil.

1.6 Kalle Bornemark

Arbetade med server/klient-kommunikation, projektplanering och klasstrukturen. Skapade även diagrammen och har fungerat som projektledare till och från.

2 Instruktioner för programstart

För att köra programmet krävs att man startar en server och minst en klient. Main-metoden för att starta servern finns i StartServer.java och main-metoden för att starta klienter finns i StartClient.java. Alla filvägar som används är relativa projektets workspace och behöver inte ändras. Det krävs även att man lägger till externa jar-filer. Dessa jar-filer finns i src/externalLibraries, i eclipse så lägger man till externa jar-filer genom att högerklicka på projektet gå till properties och sedan java build path och sedan trycka på Libraries-fliken till sist trycker man på "Add external Jars..."-knappen.

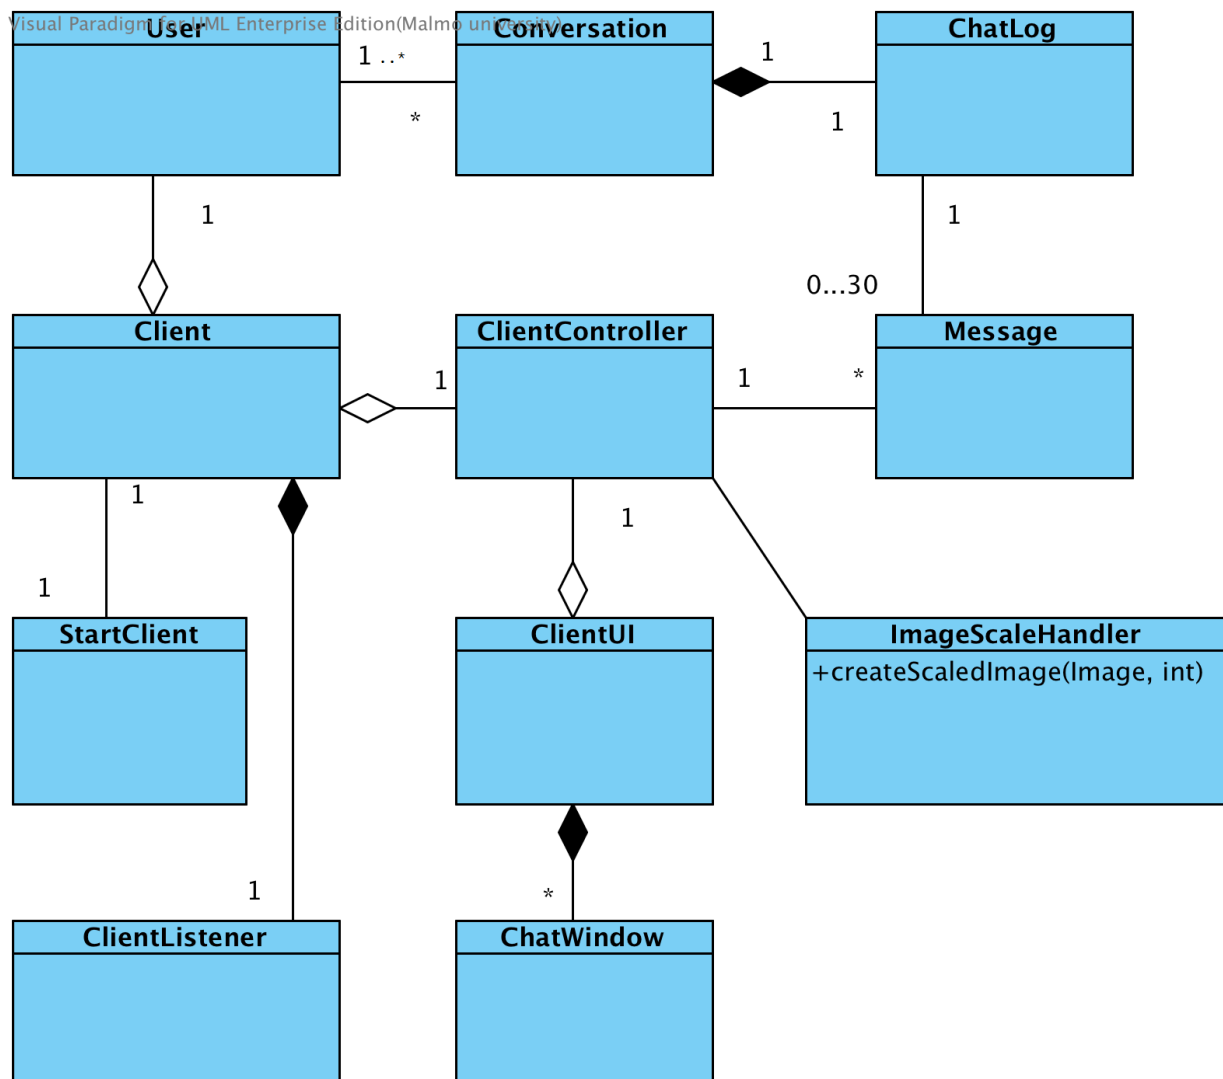

3 Systembeskrivning

Systemet förser en Chatt-tjänst. I systemet finns det flera klienter och en server. Klienterna har ett grafiskt användargränssnitt för att skicka meddelanden till alla andra anslutna klienter, enskilda klienter, eller till en grupp av klienter. Meddelanden består av text eller av bilder. Alla dessa meddelanden går via en server som ser till att meddelanden kommer fram till rätt gruppchat eller

till lobbyn. Servern lagrar alla textmeddelande som användarna skickar och loggar även namn på de bilder som skickas via bildmeddelanden. Servern loggar även användarnamn för de klienter som ansluter och när dessa stänger ner anslutningen mot servern.
